iNTELLIGENT

The iCRETE SYSTEM

iCRETE Mix Designs

iCRETE designs customized mixes for each producer using his *existing* materials. Each mix is designed to meet specified requirements such as strength, durability, heat of hydration, and other long-term properties. Proprietary mixing formulations also produce a higher quality concrete that requires less labor to install through increased workability, faster finishing time and better cohesion.

iCRETE Process

The iCRETE™ Process enables precast and ready mixed manufacturing facilities to consistently produce higher quality, more economical, environmentally-friendly concrete with the operator's existing materials. Minimal capital expenditure is required to implement the iCRETE™ Process.

The iCRETE WAITLIST

Get on the list for the technology that is the future of the concrete industry. For more information email Barry Hudson, Senior Vice President at info@iCRETE.com.
